

## **DEPOSITION AID / DRIFT RETARDANT**

## **Solution Polymer Formulation**

Solution Polymers alter the viscous (thick, sticky) and elastic (resilient, flexible) properties of the spray solution, yielding a coarser spray with greater mean droplet sizes and weights, and minimizing the number of small, driftable droplets.

**DELIVER** is composed of a long, state-of-the-art, polyacrylamide chain.

## **DELIVER** -

- Drift retardant
- Compatible with <u>all</u> glyphosate formulations
- ->> Designed to blend easily with most pesticide and/or fertilizer tank mixes

**DELIVER** is designed to create more of the right-sized droplets that will provide a higher degree of active deposition. The degree of drift hazard varies with the type of pesticide, application conditions, and vegetation near the sprayed area. Common sense and sound application technology must be followed when spraying pesticides.

## **GENERAL USE RATES**

**DELIVER** can be applied in a rate range to 1 quart to 2.5 gallons per 100 gallons of spray solution, with most applications using 1 to 3 quarts. Consult label for specific applications. Agitate for at least 2 minutes before spraying.
